

Bottled Water (Situation Statement)

18-Year-old Kelly is planning to start college in the fall. She plans to bring her bike to help her get around at college. One very hot, humid fall day Kelly knew she should bring water along to drink on her one mile ride. She stopped at the store to decide what to bring along.

**Official Reasons – Bottled Waters
Senior Contest
2002**

I place this class of bottled waters for Kelly 2-3-1-4. Upon analyzing this class I found all the waters to give Kelly fluid she needs.

In my top pair 2 places over 3. 2 is the pure water, which is all Kelly needs for a casual ride of 1 mile to college. 3 has added flavoring not needed to replenish her body's water loss. I grant that 3 is 1 cent per ounce cheaper, but flavoring is not needed.

In my middle pair 3 places over 1 because 3 is just flavored water. 1 has added vitamins which are not needed for a 1-mile ride and is to be refrigerated after opening, which she will not have available. 1 is also 3 cents per ounce higher priced.

In my bottom pair 1 places over 4 because 1 is in plastic so it is safer to carry on a bike. 4 is left at the bottom of the class because it is the most expensive per ounce and in glass.

For these reasons I place this class of bottled waters 2-3-1-4. Cuts 2-4-5.
